

PFF 7

KEY FEATURES

- Manufactured for Prodrive by Speedline
- Flow formed rim
- Lighter than standard cast wheels
- Available in a choice of colours
- 18" fitment

While there are many wheel options on the market, there are very few that suit the uncompromising demands of the Subaru range. Choosing wheels of the incorrect offset will lead to increased kickback, torque steer and tramlining.

All of Prodrive's replacement wheels use the vehicles' original equipment wheel nuts. Prodrive's PFF 7 wheel is a seven spoke design which uses special flow forming construction techniques. These enable the wheel to be made lighter than standard die cast wheels without sacrificing any of the wheels' strength or durability.
